

# CRASH ANALYSIS FOR MOBILE DEVICES

Automated Digital Forensics & Incident Response (DFIR)

## Identify Targeted Attacks

Detect Advanced Persistent Threats (APTs) and malware.

## Organization-wide disinfection

Remove threat actors from all affected devices in your organization; detect cyber espionage campaigns.

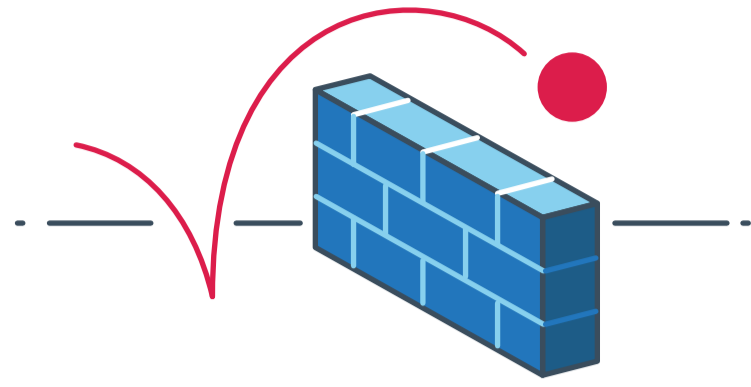

## Reduce Investigation Time

Reduce Tier-3 threat analysis time from months to minutes.

## Remediation Automation

Automated remediation of compromised devices by integrating with MDMs.

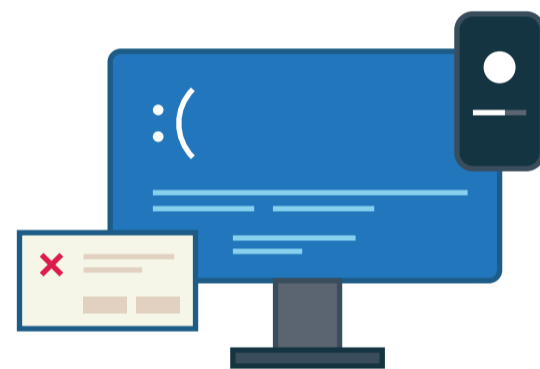

Both amateur and sophisticated threat actors can bypass security controls without a significant challenge.

01\_

02\_

Fortunately, attackers can't avoid making mistakes during initial infection, privilege escalation, and lateral movement.

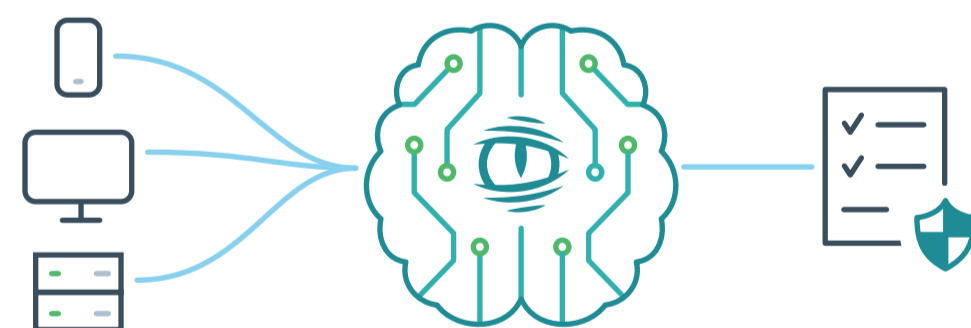

These mistakes lead to crashes, blue screens, sudden reboots, and other anomalies.

03\_

04\_

ZecOps catches these mistakes by automatically investigating crash logs and operating system telemetry.

## THE COMPANY

- Founded in 2017 by Zuk Avraham, world-renowned security researcher and founder of Zimperium.
- Team of cybersecurity veterans.
- Customers from some of the most advanced government agencies in the world.

# ZECOPS FOR MOBILE DEVICES PLATFORM

Supported  

## Instant Risk & Compromise assessment

At-scale / on-demand device analysis through collection of device logs through PC/Mac automatically (with or without UI).

## Perform pre / post-travel inspection for mobile devices

Perform Pre & Post Travel checks for Executives and VIPs with access to sensitive data that are targets for hackers while traveling.

## Advanced Persistent Threat (APT) detection & Mobile Threat Hunting

Discover APTs through initial exploitations attempts, lateral movement and malware persistence phases; mobile threat hunting capabilities not available in any other way.

Agent-less solution

On-premise or cloud deployment

Data anonymization

Machine learning-based automation

Automated DFIR Analysis

**10** Minute Deployment per mobile device
